

A photograph of a Thym serpolet plant in its natural habitat. The plant is a low-growing, dense mat of green, succulent-like leaves with small, light purple flowers. It is growing in a rocky, dry mountainous area, surrounded by other vegetation like tall grasses and other small plants. The background is slightly blurred, focusing attention on the thyme.

Labiées(lamiacées)

**Thym serpolet**

*Thymus atlanticus serpyllum*
