

A close-up photograph of the plant Torilis noueux. The image shows several green stems with finely divided, fern-like leaves. The stems are densely covered with small, white, hair-like structures (trichomes). The background is a blurred, natural setting, possibly a rocky or soil-covered ground.

Ombellifères(apiacées)

Torilis noueux
torilis nodosa

(gorges de My Brahim , début Mai)

Torilis noueux
(Tasghimout, mai)
